GRAYLING BOY MET

RUNAWAY MULE TEAM AT RES. ERVATION THROWS DRIVER UNDER WHEELS.

While driving an army truck wagon, loaded with tent canvas and a number of tail tin cans, Henry Borchers, son of Mr. and Mrs. Henry Borchers of Beaver Creek was thrown underneath the wheels of the wagon and killed, last week Saturday At the Military reservation. Military reservation.

He was assisting the Quartermas-ter department in hauling military supplies from the train to the camp site. A heavy load of canvas tents had been piled in the front part of the army truck and a number of tall tin cans were in the rear end. A pair of mules were hitched to the wagon. thenry was sitting in front on top of the high pile of canvas. When the team started the tin cans rattled and startled the mules; then a motorcycle-came along and further frightened the startled animals which started to run away. When the wagon struck the rails of the track Borchers was thrown off and beneath the wheels, one of which passed over his chest crushing him. He attempted to rise but fell back with a gaspand passed away almost instantly. Henry was sitting in front on top of

and passed away almost instantly. This tragic ending to the life of this fine young man was a terrible shock to his parents, and also to his snock to his parents, and also to his young wife to whom he had been married but a few weeks. The body was taken to, the Sorenson undertaking parlors and later to the home of Scott Wiley, on the School Section lake road where the young man was born. It remained there until the lay of the funeral.

Services were conducted by Rev. C.
E. Doty at the Michelson Memorial ket was covered with a profusion of flowers. There were a number of fine floral pieces, among whice was one from members of the Quarter-master corps. The church was well filled with friends and sympathizers, and Beaver Creek, where he had lived with his parents for a number of years, was well represented. The body was borne to the grave by six

Henry was a fine young man, and generally admired for his many good qualities. He was ambitious, industrious and dependable, and always carried any agreements he promised with the concarried any agreements he promised. We shall never forget how, when at the age of nine years, he with his still younger brother Fitness. hit the writer for a job to split and pile a ten-cord pile of wood. We told the boys they were too young but, they insisted and were given the job, and made good. We have had a warm feeling toward these two little lads ever since. They showed the kind of stuff they were made of the kind of stuff they were made of and the kind of spirit that is bound to win. Hundreds of people are sud-dened by the untimely death of this young man, and there is deep sym-

young man, and there is deep sympathy everywhere for the purents and four brothers Ernest Oscar. Alfred and Clyde, and the young wife. Henry Borchers, was born near Grayling June 27, 1900. THE BOSS IS BACK ON THE JOB

Synopsia—Graham Norcross, railroad manager, and his secretary, Jimmy Dodds are marooned at Sand Crosk siding with a young lady, Shella Macrae, and her small cousin, Maisie Ann. Unseen, they witness a peculiar train holding, in which a special car is carried off. Norcross recognises the car as that of John Chadwick, financial magnate, whom he was to meet at Portal City, and Dodds rescue Chadwick. The latter offers Norcross the management of the Pioneer Snort Line, which is in the hands of eastern speculators, headed by Breckenridge Dunton, president of the line. Norcross, learning that Shella Macrae is stopping at Portal City, accepts, Dodds overhears conversation hetween Rufus Hatch and Gustave Henckel, Portal City dinanciers, in which have a management of the line. Norcross conversation hetween Rufus Hatch and Gustave Henckel, Portal City dinanciers, in which have a material of directors to reognalize the Pioneer Short Line, which would Jeopardize their interests. To curb the monopoly controlled by Hatch and Henckel, the Red Tower corporation, Norcross forms the Citisens Storage and Warehouse company. He beging to manifest a deep interest in Shella Macrae. Dodds learns that Shella is married, but living apart from her husband. Norcross does not know this. The Boss disappears; report has it that he has resigned and gone east.

DISPOSING OF MILK SURPLUS

Conditions Likely to Exist in Well-Developed Dairy Districts During Summer.

(Prepared by the United States Depart-ment of Agriculture.)

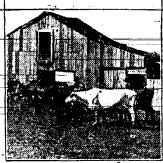

For the first time since the begin ning of the World war there is devel-oping in this country a surplus of milk, according to reports recently received by the United States Depart ment of Agriculture. Specialists of the department state that this condition probably will be only temporary during the "flush" of the season, and that it is most apparent in well-de-veloped dairy districts. It may con-tinue during the summer months, but is expected to adjust itself by fall, when demand will overtake the sur-plus of supply. The situation is largely due to the falling off in the demand for milk in the manufacture of condensed products, milk powders, casein, and similar products, for which there was a large export outlet ...

The department points out the advisability of using as much milk as possible, in fluid form and otherwise, us, a human food. Within the last generation an increased knowledge of the value of milk in the diet has resulted in an almost doubled per cap-ita consumption of milk, and consumers who purchase milk freely thereby encourage production. This is believed to be the best safeguard against a milk shortage and high prices resulting from the withdrawal of dairymen from the business during periods of large production and low ferm prices for milk.

But when the limit of human utilisation is reached dairy producers nec-essarily must decide how to dispose of the remainder. In many cases this will be a decision between selling whole milk, selling cream, or even to use a moderate quantity of whole milk for feeding, especially to young animals. In any event, a more liberal use of milk on farms should reduce the surplus, even though for solving the problem entirely.

As a guide to persons deciding to utilize surplus milk as a live stock feed, the department makes the fol-lowing, recommendations, which imp be supplemented with literature issued by the department:

Milk from a dairy herd which is not definitely known to be free from tuperculosis should be scalded before neing fed. An ordinary feed cooker is a practical means for scalding milk. This process is approximately equiv-

If You Need a Medicine You Should Have the Best

Have you ever stopped to reason why it is that so many products that are extensively advertised, all at once drop out of sight and are soon forgotten? The reason is plain—the article did not fulfill the promises of the manufacturer. This applies more particularly to a medicine.

A medicinal preparation that has real curative value almost sells itself, as like curativa value almost sells itself, as like an endless chain system the remedy is recommended by those who have been benefited, to these who are in need of it.

The death of the elders Collins in 1847 put the son partiy in the way of finding himself, for he published his father's life in two volumes the next year. He had been turning over his experiences of three years life in Iraly, and in 1850 appeared his first novel. "Autonina, or the Full of Rome." "Bustl" was published in 1852, and "Hitle and Seek" in 1853. He had not attracted the attention of the public as yet. The great crapt of his life, however, came in 1851, when he made the acquaintance of Charles Dickens.

Local Dealer Says Figures are at Lowest Point in History.

Commenting on Secretary of Comerce Hoover's recent speech appealing to the retailers of the country that they reduce their prices in ac-cord with recessions made by the manufacturer, Hans R. Nelson, local agent for the Firestone Tire & Rub-ber Company, pointed out that Fire-stone tire prices were now at the

"Back in 1913," Mr. Nelson continued, "car owners figured they were doing pretty well to obtain 4,000 miles, or even 3,000 from their tires. Now with manufacturing processes at such a high degree of perfection, as prevailing in the Firestone plants, 10,000 miles, or more, is nothing out of the ordinary.

Referring again to Mr. Hoover's speech, Mr. Nelson pointed out that

a comparison of 50 other everyday needs show that in the majority of cases the percent of price recessions is very considerably in favor of tires

WAR DEPARTMENT DOUBLES THE RATION ALLOWANCE FOR THE CITIZENS MILITARY TRAINING CAMP.

It is announced that the allowance It is announced that the allowance for rations for the Citizens' Military Training Camp to be held at Camp Grant, July 21st to August 20th, has been set by the War Department at 75 cents a day. This is nearly double the allowance for the Regular Army, and assures those who are Continued and the State of Army, and assures those who are fortunate enough to attend a "big feed" three times a day. This allowance is based on the experience of the War Department, gained during the early days of 1917, when many men who had lead sedentary lives suddenly took up a very active outdoor life and increased their capacity and desire for healthy food. "Come and get it" will sound good to the boys after a fast ball game or a swim in the Rock River, and the "Cookie" will be a popular fellow indeed.

\$10,000 BAIL FOR **ALLEGED SLAYER**

LIVINGSTON OFFICIALS CHARGE LAWSON WITH SHOOTING WIFE IN 1919.

BODY OF VICTIM WAS EXHUMED

Statement That Shooting Was Acc dental Questioned Because of Alleged Discrepencies.

Howell, Mich.-Willard A. Lawson of Detroit, was brought here and arraigned before Justice R. D. Roche charged with the murder of his wife on Sept. 21, 1919, while hunting ducks in a swamp near Island Lake, Livingston county. He pleaded not guilty and demanded an examination, which set for July 6. Justice Roche fixed bail at \$10,000, which attorneys for the defendant endeavored to arranged.

An alleged discrepancy in stories told by Lawson of the circumstances connected with his wife's death and the theory of the prosecution that a wound such as the one which killed Mrs. Lawson; could not have been inflicted accidentally in the manner he described, are the principal links in the chain of evidence so far revealed by the officials

Lawson's statement to former Prosecutor Lyons, a 17-page document, is said to have set up the claim that the two were sitting in a rowhoat, that he had his gun-elevated, following birdsin flight, when the weapon, an auto matic, was accidentally discharged. When the body was exhumed, an autorevealed that the shot entered the back of the woman's neck, through a single small hole, and took a course downward, it is declared.

Harry C. Aspin, of 702 West Dayton street, Flint, a brother of the dead wo man, who signed the warrant, has informed the officers that his sister and Lawson did not get along well during the six years of their married life Asnin also declared that Lawson's explanation to members of the family of the fatal shooting differed materially his explanation to the officers in the 17-page sworn statement.

The body of Mrs. Lawson was ex humed a short time ago from a ceme tery at Auburn, Mich., in the course conference of Salvation Army workers, of an investigation made upon the re quest of relatives under direction of the attorney-general's department and Special Prosecuting Attorney Glenn C. Yelland, of Livingston county. this investigation which led to the is suance of the warrant.

Every Woman Should Give Lydia E. Pinkham's Vegetable Compound a Trial First

Chicago. Ill.—"I was in bedwith a female trouble and infiammation and had four doctors but none of them did me any good. They all said I would have to have an operation. A druggiat's wife told me to take Lydia E. Pinkham's Vegetable Compound and I took 22 bottles, never missing a dose and at the end of that time I was perfectly well. I have never had occasion to take it again as I have been so well. I have a six room flat and do all my work. My two sisters are taking the Compound upon my recommendation and you may publish my letter. It is, the goapel truth and I will write to any one who wants a personal letter."—Mrs. E. H. HAYDOCK, 6824 St. Lawrence Avs., Chicago, Hi.

Burlington, Vt.—'I suffered with female trouble, and had a number of doctors who said that I would never be any better until I had an operation. I was so bad-I could hardly walk across the floor and could not do a thing. My sister-in-law induced me to try Lydia E. Pinkham's Vegetable Compound and it certainly has helped me wonderfully. I keep house and do my work and have a small-child. I have recommended Vegetable Compound to a number of my friends and you may publish my testimonial."—Mrs. H. R. SHARON, Apple Tree Point Farm, Burlington, Vt.

In hospitals are many women who are there for surgical operations, and there is nothing a woman dreads more than the thought of an operation, and the long weary menths of recovery and restoration to strength if it is successful. It is very true that female troubles may through neglect reach a stage.

It is very true that female troubles may through neglect reach a stage where an operation is the only resource, but most of the commoner aliments of women are not the surgical ones; they are not caused by serious displacements, tumors or growths, although the symptoms may appear the same. When disturbing aliments first appear take Lydia E. Pinkham's Vegetable Compound to relieve the present distress and prevent more serious troubles, in fact, many letters have been received from women who have been restored to health by Lydia E. Pinkham's Vegetable Compound after operations have been advised by attending physicians.

Discard Stale, Dirty, and Cracked Eggs—Put Down Family Supply When They are Cheap and Plen-tiful—Water Glass is Best Ma-terial to Use.

Boys and girls who are members hoys and girls who are members of poultry clubs, or those who are interested in any way in chickens, should learn how to candle and preserve eggs. Candling means the sorting out of bad eggs before a strong light in such a manner that the rays of light come to the eye thru

the rays of light come to the eye thru the egg so that the contents can be seen and the condition noted.

The shell of a newly laid egg has a soft "glow" or "bloom" which is a sign of perfect freshness. This glow or bloom is destroyed by handling, and in any case disappears after the egg has been exposed to the nix for a short time. After that it is difficult to distinguish a fresh egg from an old one by the appearance of the shell, so canding becomes necessary if you would be sure that the egg is good. Candle Eggs in a Dark Room.

Eggs can be candled best in a dark com, by the use of a bright light noting by the use of a bright fight inclosed in a box or case having a hole a trifle smaller than an egg directly opposite the light. The egg is held at this hole for examination. If you are using a box and a hand lamp the box should have a hole at the top, otherwise the heat from the top of the chimney would set the box on fire. A tester fully made of the following described chimney made of tin, such as is used on a lamp for testing eggs in incumtors, may be used for candling under tax deed or deeds issued therein which case you would not need the box, as the eggs are tested by means of a hole in the side of the of this notice, upon payment to the

During the late spring and early summer—April, May and June—eggs usually are abundant and reasonable in price, and that is the time special meetings read and approved.

Crawford County members of the Moved and supported that letter when generally they are scarce and the prices high. Fresh eggs, properly preserved, may be

kept from 8 to 10 months and be al-most as good for household purposes as fresh eggs. Another reason for preserving eggs. Another reason for preserving eggs in water glass, for instance, is the fact that they do not acquire the objectionable "cold-storage taste." Allow Three Dozen to Gallon.

To preserve 15 dozen eggs in water glass these directions are given by the specialists of the United States Department of Agriculture:

Select a 5-gailon earthen crock, and and allow

clean it thoroughly, scald, and allow it to dry. Heat 10 to 12 quarts of it to dry. Heat 10 to 12 quarts of water to the boiling point, and allow it to cool. When the water is cool, measure out 9 quarts, put into the crock, and add 1 quart of sodium silicate, commonly called water glass, which can be bought at any drug there. Stig well so that the solution store. Stir well, so that the solution comes thoroughly mixed.
The solution thus prepared

ready for the eggs, which may be the heirs of said grantes, or where, put in all at once, or from time to abouts or the postoffice address of the time as they are obtainable. Care executor, administrator, trustee or should be taken in putting them int the jar not to crack or break the shells; also be sure the solution cov-ers the eggs at all times. Put the crock containing the preserved eggs in a cool, dry place, and cover with a tight lid or waxed paper to pre-

vent evaporation.

To preserve a smaller or larger number of eggs, the solution should be mixed and prepared in the same proportions.
Use Only Clean Fresh Eggs.

Use Only Clean Fresh Eggs.

If best results are to be obtained
the eggs should be clean and fresh,
and preferably infertile: For this
reason it is always best when possible to candle the eggs carefully before preserving them unless they are known to be strictly fresh. If an egg is only slightly soiled a cloth dampened with vinegar may be used to remove stain, but eggs should never be washed with water or soan and water, as water removes the protective coating on the shell and mavtend to cause the contents to spoul. Never use badly soiled or cracked eggs.

They may spoil all the others.
Fresh eggs preserved according to
these directions usually will keep for

Simpson, satisfactorily for cooking and for the table. If, however, preserved eggs are to be boiled; a small hole should be made with a pin in the larger end of the shell before placing them in the day of the water tellow. the water, to allow the air in the egg to escape when heated, and thus prevent cracking.
